

Lab 4

(Show input and output side by side for all problems)

1. **Sharpen** the following image by applying the following and find out which one is better:
 - a) **Unsharp Masking**
 - b) **High Boost Filtering**

2. **Sharpen** the following image using the concept of **Laplacian Filtering**.

3. Use **Roberts-cross**, **Sobel**, and **Prewitt** operators to detect the edge of the following image.

4. **Show** performance comparison among High Boost, Unsharp, Laplacian Roberts-cross, Sobel, Prewitt and Canny filtering for edge detection – find out which one is better for the given image.
